

TMB-101-1-A

## Triaxial Accelerometer Mounting Block

### Product Features

- Low Cost
- Customizable
- Allows attachment of 3 single axis accelerometers

Triaxial accelerometer mounting adaptors increases the utilization of your present inventory of single axis sensors when you need to take measurement from 3 directions at a sensor(s) location. It is always best to use triaxial accelerometers but for cost avoidance issues triaxial mounting adaptors offer an economical option. These adaptors mate to three standard single axis accelerometers to monitor vibration in three orthogonal axes. User to install three single axis accelerometers on one mounting block to obtain vertical, horizontal, and axial measurements from the same location without the high cost of a triaxial accelerometer. The mounting block is threaded for industry standard 1/4-28 UNF threaded sensors and adapters can be purchased for other thread types.

### Product Specifications

Model No	TMB-101-1A
Sensor Mounting	1/4"-28
Number of axis	3
Pull Strength	N/A
Case Material	Stainless Steel 304
Dimension	25 X 25mm
Compatibility	Compatible with all single axis, top exit accelerometers
Sensor Mounting	1/4-28 Integral Stud
